Education

University of Almería (UAL), Almería, Spain

Bachelor's Degree in Computer Engineering, 2024 to 2030 (expected)

Experience

ED50, small consultancy, Spain

Infrastructure build, June 2026 to August 2026 (in production)

- Designed and deployed self-hosted infrastructure on Proxmox VE, running 11 monitored services with zero ports open to the Internet.
- Published services through Caddy with a wildcard Let's Encrypt certificate (ACME DNS-01), with remote access only over Tailscale.
- Implemented a 3-2-1 backup strategy verified by test restores, with client-side encrypted offsite copies on Hetzner.
- Found and fixed a power schedule that had silently prevented the NAS's nightly backups from running for years.
- Migrated about 145 GB of photo archives to Immich with verification.
- Built TicketBot with n8n, a vision model and the Paperless-ngx API, turning a receipt photo into an archived fiscal document in about 15 seconds.

Projects

Vigía, Java 21, Spring Boot, systemd, 2026

- Built a monitoring service with HTTP and ping checks across 11 production services, alerting on Telegram only on state changes.
- Wrote 44 tests, including timeouts, 5xx responses, broken YAML and notifier failures.
- Runs in an unprivileged LXC at 172 MB of RAM with a 0.8-second startup.

Protocol Analysis of Wireless Audio Transceivers, Wireshark, usbmon, 2026

- Mapped the 4 USB interfaces of a Corsair wireless dongle and captured its traffic on Linux without running as root.

Certifications and Languages

- **Certifications:** Cisco CCNA 200-301 (in preparation, exam planned for February 2028)
- **Languages:** Spanish (native), English (C1), German (A1)

Technical Skills

- **Infrastructure:** Proxmox VE, LXC, Docker, Docker Compose, Debian, systemd, cron
- **Networking and access:** TCP/IP, subnetting, DNS, Wireshark, Packet Tracer, Caddy, Let's Encrypt, Tailscale, WireGuard
- **Backup and automation:** vzdump, rsync, Hyper Backup, n8n, GitHub Actions, Git
- **Programming:** Java, Spring Boot, Maven, Python
